

JAVA 8 INSTALL ON LINUX

Installing Java 8 on Linux

This is the easy one. Please use your package manager to install the following packages (I am referencing this for ubuntu 20):

- `openjdk-8-jdk`
- `openjdk-8-jre`
- `openjdk-8-doc`

For instance I used the following command:

```
$: sudo apt install openjdk-8-jdk openjdk-8-jre openjdk-8-doc
```
